#### DILO COUPLINGS DN20

The coupling allows to establish a connection by simply fitting both coupling parts into each other. Before load relieving of the coupling seats the pressure- and vacuum tight coupling is sealed inside with an 0-ring during the coupling process. The coupling is forced to be open in coupled position. If both coupling sides are separated again the sealing seats shut off automatically.

All couplings are temperature-resistant from -40 °C to +80 °C.

In special version these couplings are also available for a temperature range of -60  $^{\circ}$ C to +80  $^{\circ}$ C.

The suitable connecting parts for DILO couplings must be ordered separately.

#### For easy coupling and uncoupling of hoses

The quick coupling is very useful in all fields of application where hoses have to be frequently loosened and reconnected e. g. during final tests of completely mounted GIS fields. Thanks to the clamp lock the DN20 hoses can easily be connected without any loss of SF6 gas. Thus the handling times in GIS production are shortened and productivity is increased considerably.

#### Important note:

The quick coupling is only compatible with DILO coupling groove parts of version 2 (additional "V2" stamp on the flange or wrench size).

# PN64 DN20 COUPLING TONGUE PART WITH AIR FILTER

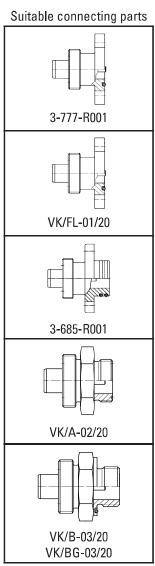

Order No.: 6-1281-R001 Material: Brass

#### Description

This coupling tongue part allows gas compartments which are under vacuum to be flooded with air after the SF6 gas recovery and it is not necessary to use any service cart. The integrated 100-µm filter sieve prevents dirt particles from ambient air penetrating the gas compartment during the flooding process.

### PN64 DN20 GAUGE CONNECTING COUPLING

# Suitable connecting parts Gauge with connecting thread G ½ A Spare 0-ring Order No. 05-0057-R225

#### Description:

The gauge connecting coupling serves as connecting piece to a coupling groove part DN20. When coupling, a pin in the gauge connecting coupling opens the flow of the opposite coupling groove part (forced opening). This allows to read the present operating pressure on the screwed-in gauge. When disconnecting, the concial nipple of the groove part is closed by spring load (pressure and vacuum tight). If the gauge connecting coupling is not connected the gauge shows "zero pressure". The connecting coupling allows to install the gauge in any required position (rotatable 360°).
